Lesson 02 Demo 09

Using Inline Styles in HTML

Objective: To apply inline styles in an HTML file and customize the appearance of web page elements
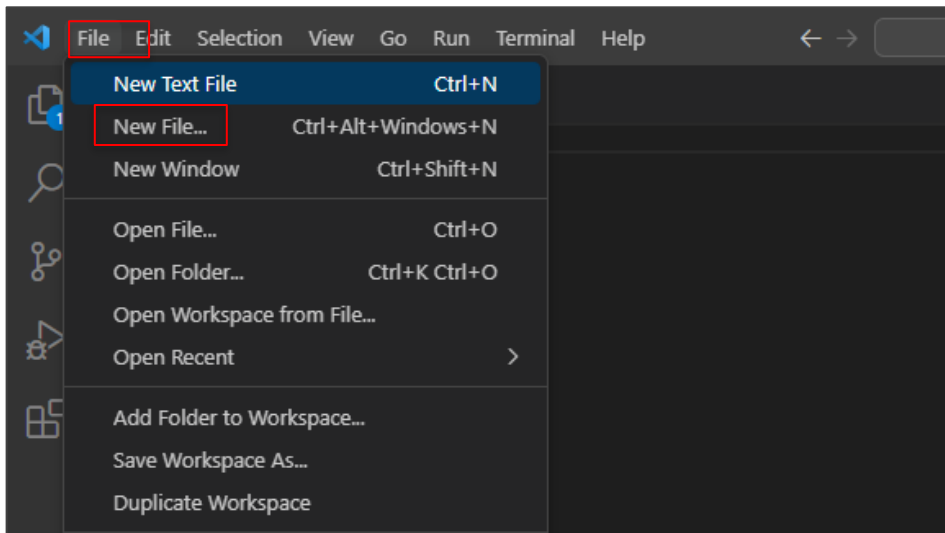

Tools required: Ubuntu Linux VM

**Prerequisites:** Visual Studio Code

Steps to be followed:
1. Create an HTML file and add inline styling code
2. View the expected output

Step 1: Create an HTML file and add inline styling code

1.1 Open Visual Studio Code, right-click on the **File** menu of the code editor, and select **New File...**

1.2 Create a new file and save it as **inline.html**

1.3 Enter the following HTML code to apply inline styles to web page elements

<!DOCTYPE html>
<html>
 <head>
  <title>Playing with Inline Styles</title>
 </head>
 <body style="background-color:rgb(39, 39, 38);">
  <p style="color:rgb(15, 173, 235);font-size:40px;text-align:center;">
   **This is known as Inline Styling.

   **with world-renowned universities and leading corporations.**
 **</body>**
</html>

Step 2: View the expected output

2.1 Locate the inline.html file, right-click on the file, and select **Open With "Google Chrome"**

2.2 Ensure that the web page displays a dark background, a center-aligned paragraph with large blue text, and the phrase Inline Styling in bold

By following these steps, you have successfully created an HTML file using inline styles to format text and background color and displayed it in Google Chrome.
